

Ultra-mobile Notebook

The GoBook MR-1 notebook is as powerful and rugged as it is ergonomic and portable, sporting a small and light footprint even for a fully rugged, ultra-mobile notebook. Designed for anywhere, anytime, **General Dynamic Itronix's** MR-1 has an Intel Core Solo 1.2 GHz processor to give it the power to leverage multi-threaded applications and boost overall speed and performance. The GoBook also features unparalleled outdoor viewability with DynaVue technology. The GoBook MR-1 is engineered with a stackable expansion module architecture to integrate additional functionality. It offers a powerful array of industry-leading wireless capabilities, and can simultaneously deploy four integrated radios, including GPS, for the ultimate in wireless coverage. Designed with data security in mind, the GoBook MR-1 incorporates a sought-after assortment of secure computing features, including a TPM 1.2 (on legacy stackable expansion module) and an integrated fingerprint scanner.

Digital Note-taking System

Precise Digital has teamed with Note-Link to create the Note-Link digital note-taking system, giving users the ability to take handwritten notes and store them as PDF files while recording events. Clicking on any on-screen handwritten note rapidly retrieves the specific event within the digital audio or video recording. While recording audio or video using any ForTheRecord (FTR) application, users take handwritten notes using the Note-Link digital pen and paper. Notes are stored in the Note-Link digital pen and transferred to the user's PC. Stored in an Adobe PDF format, each note is a link to the specific event the user was recording when he wrote the note — a simple click replays the event within the audio or video. This Note-Link and FTR recording solution safely stores watermarked video, audio and handwritten notes. Note-Link software was developed to integrate FTR applications, the Logitech io2 digital pen and Anoto functionality.

Weather Tracking Handheld Tool

SWIFT Weather introduces its SWIFT Mobile severe weather tracking tool. SWIFT Mobile is specifically designed for use with handheld devices and runs on Windows Mobile devices such as Motorola Q Palm Treo, Samsung BlackJack, and T-Mobile's Dash, SDA and MDA. SWIFT Mobile features more than 1,100 weather maps with weather radar down to street level, GPS tracking, perimeter reports and up-to-the-minute data feeds from 140 weather service offices. SWIFT Mobile provides multiple layers of weather data including radar, cloud imagery and severe weather warnings for blizzards, hurricanes, hail, wind or tornadoes. It includes an audible ring tone and display on the handheld device to provide advanced notice to the location and estimated time of arrival of the weather threat.
